

Guard Rails

To provide safety to workers near the edge of a rooftop, Rooftop Anchor offers safety guardrails to be installed along open-sided walking surfaces, stairways, ramps, and landings located more than 30 inches above floor level. Whether dealing with new, refurbishment, or upgrading of existing structures and developments, we can provide safety compliant guardrail and handrail designs for your building. We ensure that our systems are current with North American Legislation and Safety requirements, as well as IBC/ICC and OSHA regulations.
