

## Monorails

Monorail systems are used to access difficult-to-reach or otherwise inaccessible exterior or interior glass areas. Monorails provide continuous horizontal movement and may offer design solutions in areas such as:

- Cornices
- Overhands
- Interior curtain walls
- Atriums

Monorails are used to support suspended one-man cages, one man rope descents, or powered platforms. Monorails incorporate a track that runs parallel to the windows building, and a trolley that moves freely along the track.
